# STORYTELLING

## Polaris: The Star of Web 3.0

In the vast universe of blockchain technology, Polaris was born as a brilliant guide, destined to light the way for those seeking accurate and accessible information on the Hedera blockchain. Our software creation and development team, located in Cuba, has faced unique challenges, but has also found opportunities to innovate and deliver effective solutions.

Polaris Web3 is our utility ecosystem designed to facilitate access to information on the Hedera blockchain in an easy, fast and convenient way. Inspired by the North Star, known for its constancy and ability to guide navigators throughout history, we have created a platform that seeks to be equally essential and reliable in the Web 3.0 world.

In this ArtBook, we will explore the journey of Polaris, from its initial conception to its future developments, including the launch of our NFT collection. Through illustrations, sketches and commentary, we will share the vision and values that drive our project. We invite the Hedera community and all blockchain technology enthusiasts to join us on this adventure, as we continue working to make Polaris an indispensable tool in the Hedera ecosystem.

# THE CONCEPT BEHIND POLARIS

## The Inspiration of the North Star

In the night sky, the North Star has been a constant reference point for navigators for centuries. Its constant brightness and fixed location in the sky make it an infallible guide. This symbolism of guidance and constancy is what inspired us to name our platform Polaris.

Polaris is positioned as the shining star in the vast Web 3.0 sky, providing users with open and accessible tools to navigate the Hedera blockchain. The grandeur of the central star in our artwork symbolizes our leadership position, while the smaller stars and clouds represent the spread of knowledge and accessibility we offer.

Our purpose is clear: to be the best platform on the Hedera network for easy, fast and convenient access to information on the blockchain. Currently, there is no specific platform on this network that offers the analytics and tracking tools that Polaris provides. With our ecosystem, we seek to fill this gap and become an essential resource for the Hedera community.

The accompanying artwork is a visual representation of these values. The large, bright star in the center captures the attention, symbolizing the clarity and focus of our tools. The smaller stars in the background represent the various aspects of our ecosystem, while the clouds, which absorb and spread the starlight, symbolize the diffusion of knowledge and accessibility that we offer.

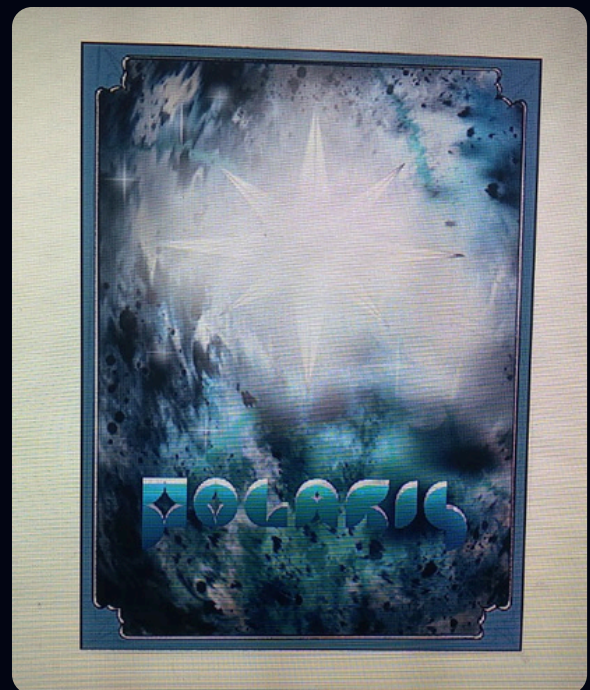

In an often complex and dark environment, Polaris stands out as a beacon of light, guiding users through the vast information available on the Hedera blockchain and making it more accessible to all.

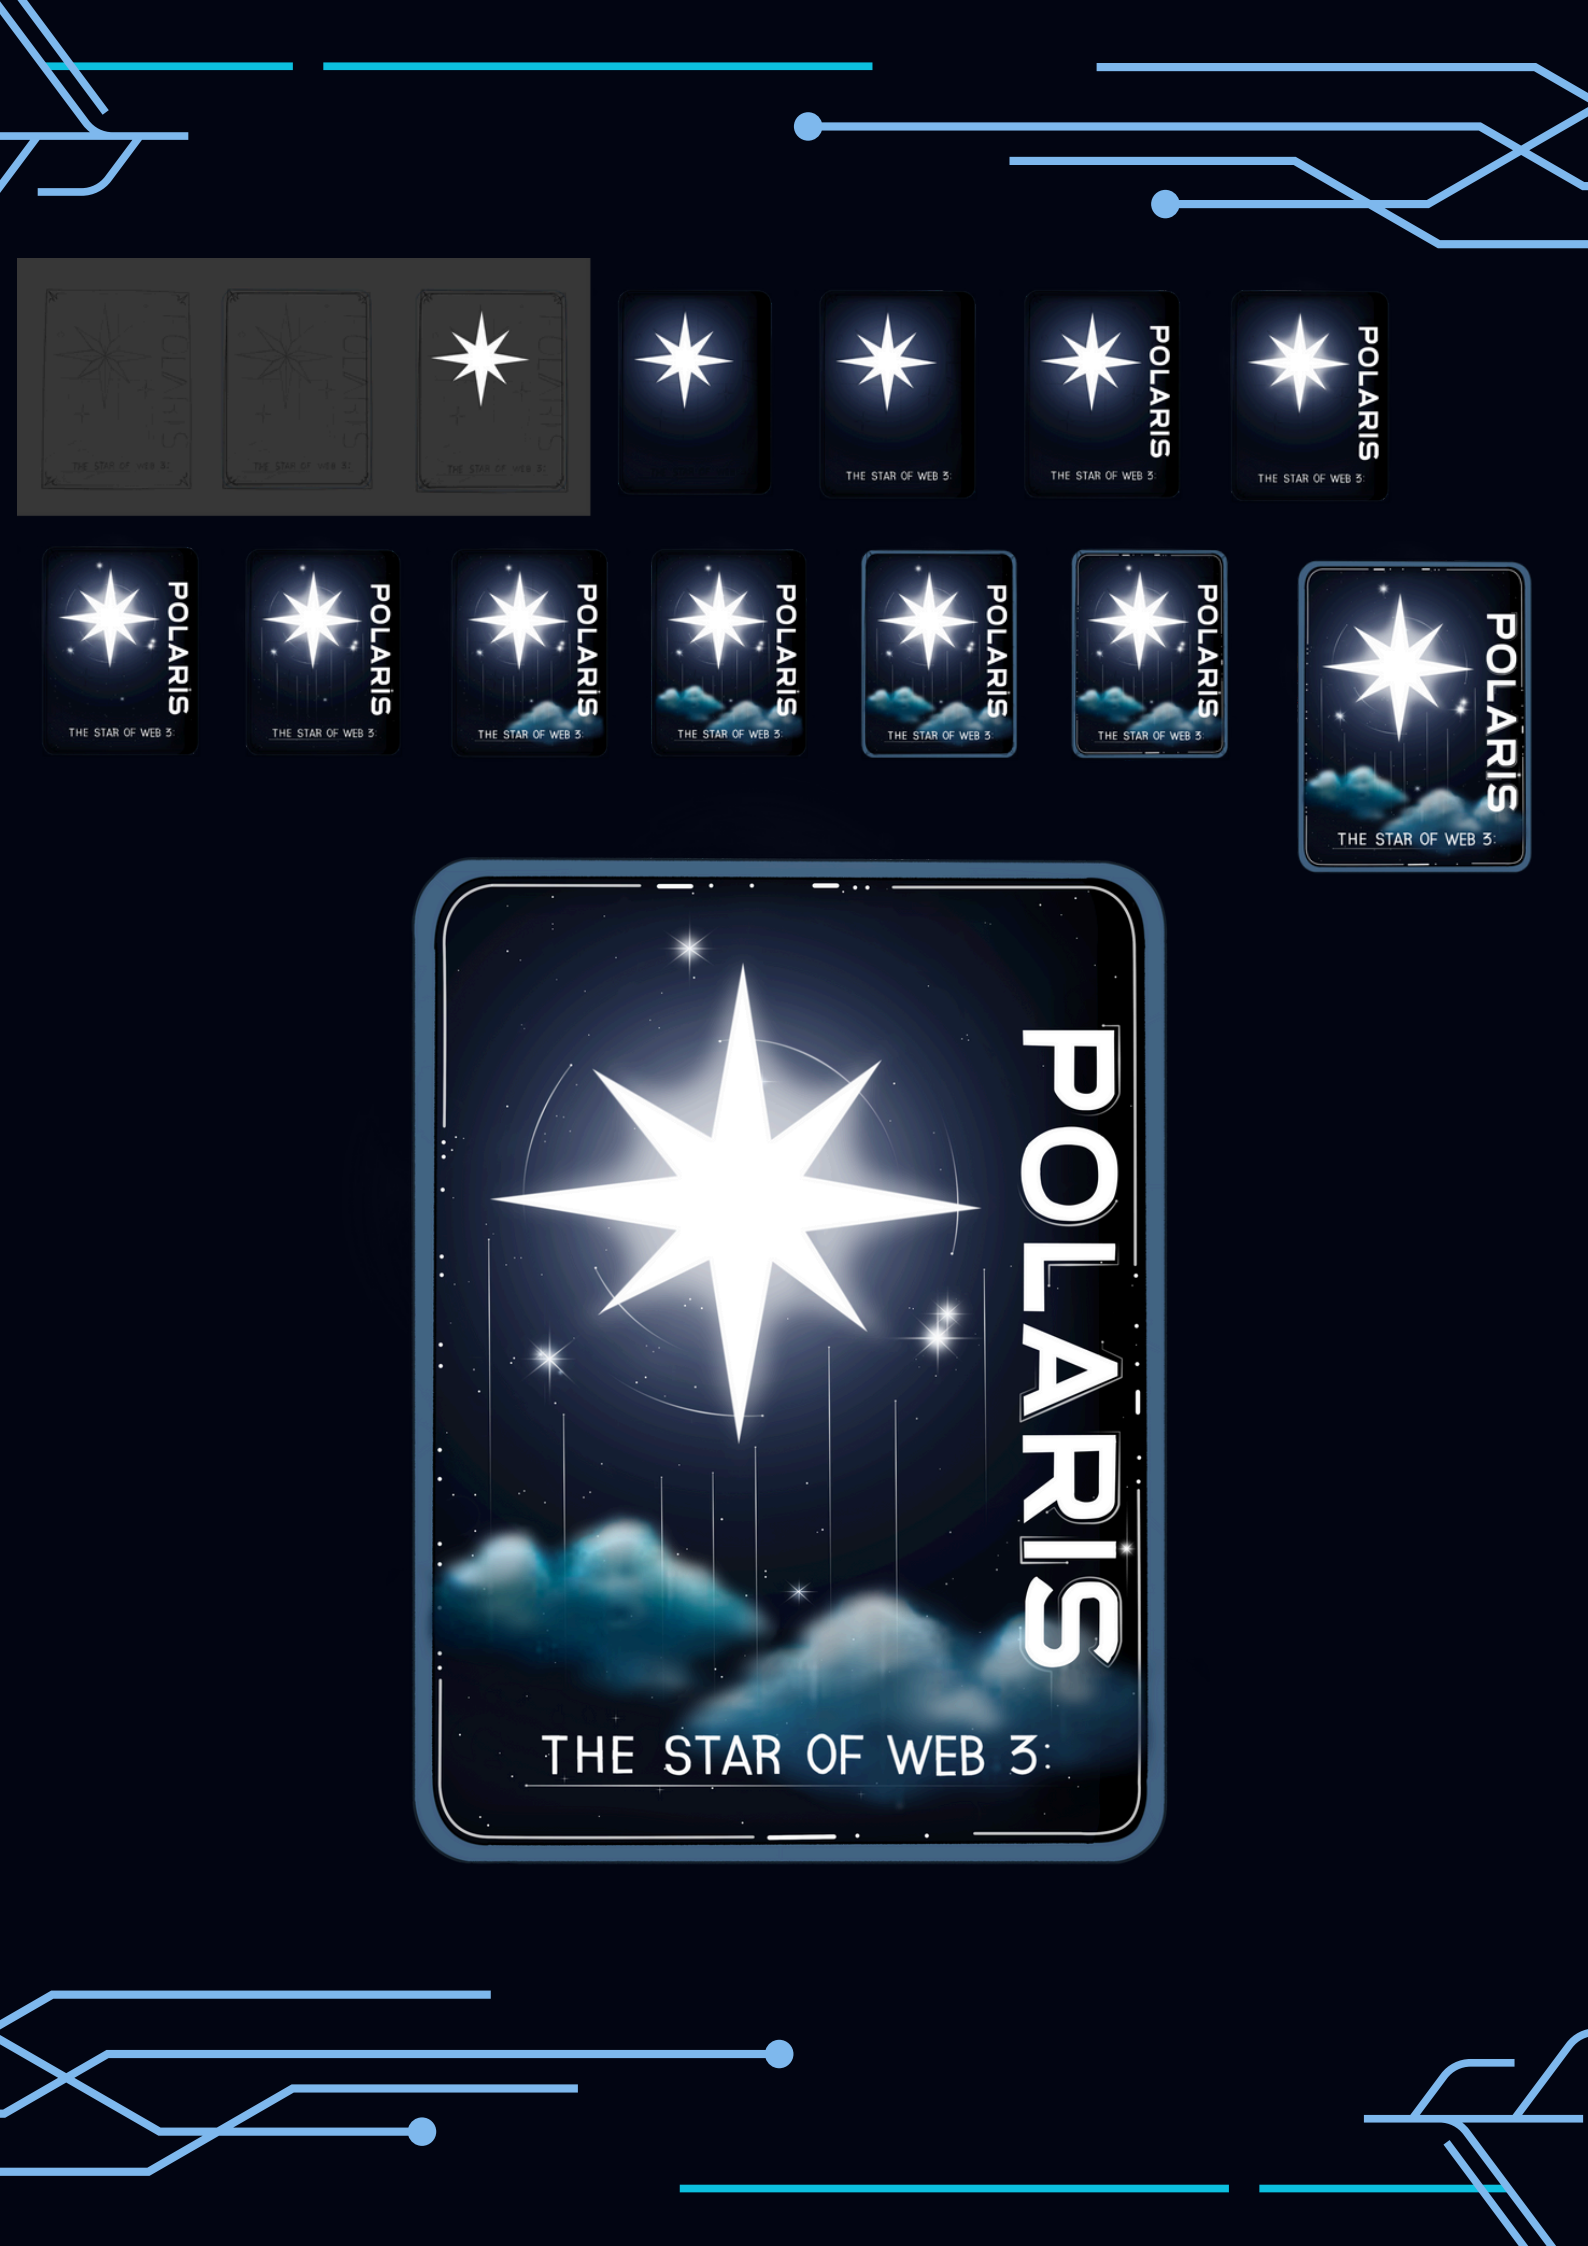

# CREATIVE PROCESS

## From Initial Sketches to Realization

The development of Polaris has not only been a technical challenge, but also a creative adventure. Below are some of the initial sketches that capture our vision in the early stages. Every line and shadow in these sketches tell the story of a project born out of passion and necessity. These initial designs were instrumental in defining the aesthetic of the piece.

# THE FUTURE OF POLARIS

## New Horizons and the NFT Collection

The future of Polaris is bright and full of opportunities. We will soon be launching sample NFT collections in Kabila with the goal of obtaining funding to continue expanding our platform. These NFTs will not only be a source of financial support, but also a way to engage the community and reward our most loyal users. We are committed to continue innovating and providing tools that make the Hedera blockchain more accessible to everyone.

This art would not have been possible without the effort and dedication of our incredible team. We would like to thank each member of our team, as well as our collaborators and the Hedera community for their continued support and enthusiasm.
